Re: **As-Built Plan Review**
Joanne Drive Subdivision

Members of the Board,

On behalf of our client, Kendall Homes, LLC., we have revised the As-Built plan for the referenced project, dated January 31, 2024. In response to comment made by Places Associates, Inc., in a letter to the board, dated December 20, 2023, we offer the following:

1. The current property owners' names should be shown in addition to the Lot numbers.
Owners names are now provided on the as-built plan.
2. Please provide a volumetric comparison of the stormwater basin volumes by elevation as well as the volumes for the sediment forebays. The riprap texture makes the bottom contours illegible – please lighten the hatch and show the internal stone baffle defining the sediment forebays.
Volumetric comparison of the infiltration basins and sediment forebays between the proposed design and as-built condition are now provided on the as-built plan. The hatch of the riprap has been lightened to improve contour visibility. Internal baffle locations are now apparent via the as-built contours.
3. All basins have deviations from the proposed outlet elevations (examples Basin 1, 6" orifices at 203.2 versus 203.5 proposed). The outlet pipe from the outlet structure in the cul-de-sac has a slope of 0.004, please confirm self cleansing velocity. Please run the drainage calculations using the as-built outlet and storage data to show compliance with the drainage calculations.
As-built drainage calculations have been provided and are attached hereto.
4. Please include on the Engineers certification on the plan a statement that the drainage system in the as-built condition will function as designed based on as-built calculations.
The engineer's certification has been modified to include this statement.
5. The outfall to Basin SMA-1 is in a basin created by a natural berm. Given the relatively flat slopes of the two inlet pipes, please add this area to the drainage calculations to make sure that ponding in this small basin does not have a deleterious effect on the basin and inlet.
Additional topographic information is now provided at the SMA-1 outfall. The natural berm is below the bottom of basin elevation, therefore the tailwater does not impact the drainage calculations for the basin.
6. Several street trees near the stop sign on Forrest Road are not shown on the as-built. The tree near the mailboxes has damaged bark and may need replacement in the spring prior to street acceptance.
The missing street trees have been located and are now shown.
7. Street trees shown comply with the agreed upon locations with the Planning Board. The office did not include the wetlands replication in our review as the Conservation Agents have been regularly inspecting this site.
No response needed.

8. The outlet structures in the vicinity of the cul-de-sac indicate 5" orifices in the as-built, 4" were proposed. Please verify the size.
The orifice diameters have been re-measured and confirmed as 5". The as-built diameters have been used in the as-built drainage calculations.
9. Most of the monuments shown on the plan were easily visible on the site walk. Some of the monuments (mostly in grass areas) were not visible on this site walk but were visible on previous site walks so this is not a concern.
No response needed.

We thank you for your attention to this matter. If you have any questions regarding this matter, please feel free to contact our office.

Respectfully,
Stamski and McNary, Inc.

Paul Kirchner, E.I.T.

George Dimakarakos, P.E.

Hydrograph Summary Report
